

Joint commitment to the sustainable operation of Ludwig Kameraverleih GmbH and MBF Filmtechnik GmbH

Screen Green! As two companies with 50 years' experience in the rental of film, lighting and stage equipment, it is our declared aim to take responsibility for a sustainable film industry.

We are not simply following a long overdue climate protection trend. Rather, we are becoming active ourselves by demanding responsibility from our cooperation partners and promoting environmentally friendly technologies. We also support our customers in the development and implementation of measures to protect the climate and environment.

By signing the *Joint Commitment*, we commit ourselves to working in the best possible low-emission and sustainable manner in all locations and departments of our companies.

This applies in particular to the following measures:

1. How we travel

Our employees only use air travel when otherwise unavoidable or if the travel time by train exceeds 6 hours. For any and all domestic and international flights we commit ourselves to a CO₂ compensation. If the transport of equipment and material is absolutely necessary we will combine the shipments and use low-emission transportation.

2. Our products

We are already increasingly offering our customers the most environmentally friendly equipment and technology available. To this end we are constantly expanding our portfolio in line with our sustainable goals. We also participate proactively in the development of new sustainable technologies.

In addition to the conventional consumables (eg tape, gels) we offer ever more environmentally friendly alternatives. Following a trial period these alternatives become environmentally friendly standards. The selection of our suppliers and cooperation partners is becoming increasingly climate-conscious.

3. Waste reduction

We actively refrain from disposable products and as far as possible we avoid plastic and plastic packaging. Our waste is consistently separated and recycled. Hygiene and office supplies are environmentally friendly throughout our organisation. Here too we are constantly exploring sustainable alternatives.

4. Self regulation

Our Environmental Manager is there to oversee the effective and consistent implementation of our measures. Certified by TÜV Rheinland as an environmental protection officer through checks are carried out throughout both companies and at all locations to ensure the continuous implementation of our goals. Our Environmental Manager is a central contact person for clients, crew, cooperation partners and sustainable initiatives.

5. Work in progress

We undertake to record and above all disclose all of our experiences in implementing this voluntary commitment. Any obstacles and problems will be honestly shared and we will regularly evaluate, reflect and if necessary adapt the *Joint Commitment*.

Equipment can be hired, the responsibility belongs to all of us!
